

CPA PLATFORM is a free tool for humanitarian, development practitioners, community-based and civil society organizations, and service providers which allows to manage, collect, analyze, and share data among practitioners to respond to communities and individuals' protection risks and resulting needs.

Real time monitoring of results at both output and outcome levels

The Platform includes up-to-date analysis of the context and tracks progress of interventions

Reduced time between assessment and delivery of services

to the right-holders after referrals

Standardized processing and analysis of complex quantitative and qualitative data

- » Automatically generates indicators based on quantitative data inputs
- » Standardizes coding of qualitative data
- » Enables mixed-method data collection and analysis through providing clear linkages between quantitative and qualitative data

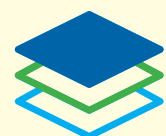

Comparable data across different geographical locations

to explore both intra and inter-country dynamics

Built-in personal data protection

that implements PIM standards and is GDPR compliant

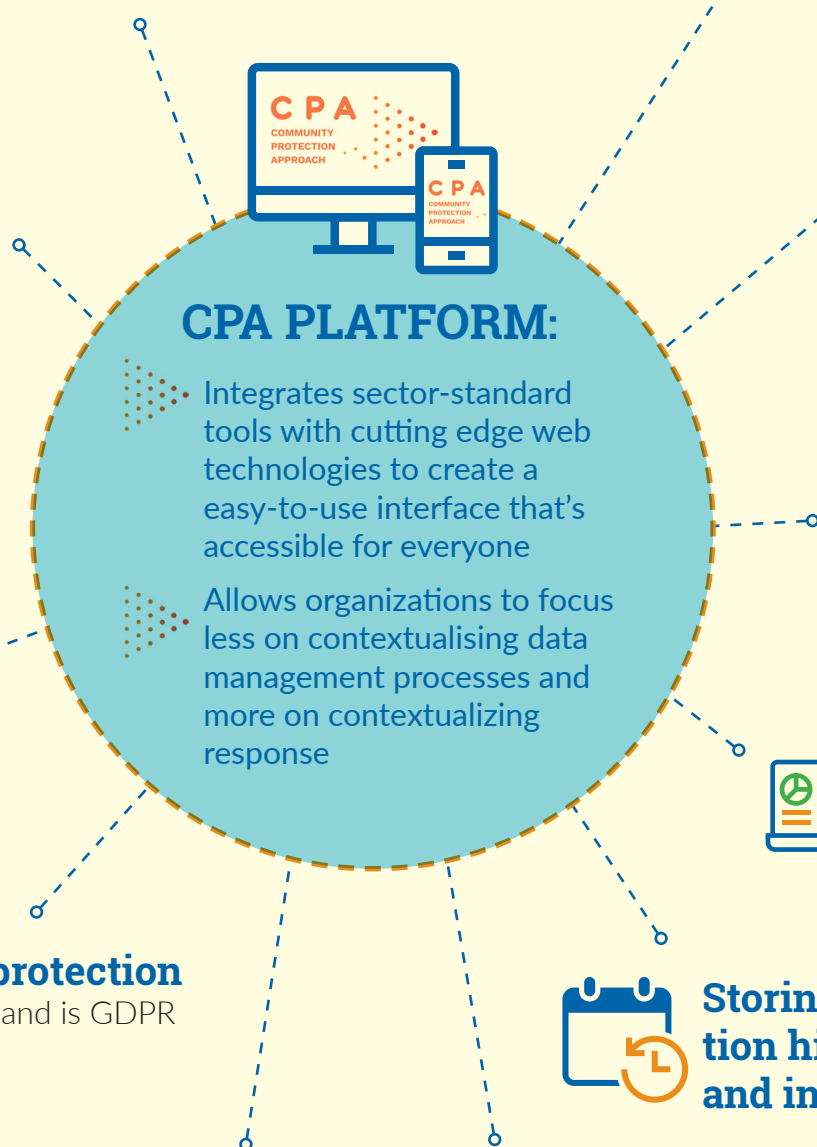

Multi-layered access control and permissions system

adaptable to any organizational structure and workflow

Simple integration with data analysis and visualization solutions

allowing for creation of in-depth interactive analysis dashboards

Accessible and validated resource on the needs of communities

which reduces assessment fatigue and lets organizations focus more on implementation

A complete referral and response management system

customizable to any organization's workflow and organogram

Automated and customizable project reporting,

allowing for generation of monthly and real-time project reports

Storing and easy access to intervention history, activities, collected data and indicators on community pages
